

## **ProManage Description**

Project ProManage is a command hub that revolutionizes managerial landscapes. This application is designed to bring ease in the workplace and foster healthy relationships between employees and managers while streamlining operations. ProManage provides managers with the ability to track the status of each of their employees on each one of their tasks. Whether the employee is delivering a package on the other side of town or is out on lunch break the employee will be able to update their status so that the managers are aware of the operations that are taking place. This application does not allow managers to track the employees every move but instead it encourages the employee to proactively show their contributions thus showing the arenization they work for why they are such an asset.

There are two interfaces within the ProManage application, the administrative and the employee side. On the administrative side, the managers can assign tasks to their employees, track the status of the tasks they have completed and send a message directly to them if any issues arise. The second interface is the employee interface where the employee can view tasks assigned to them for the day/week update the status of each task as they work towards the end goal. The employee will also directly communicate with their manager via chat if there are any issues that arise at work. This eliminates the need for communication between direct text messages creating a better work life balance. ProManage aims to eliminate micromanagement and instead fosters a culture where employees feel valued and managers can manage with a sense of ease.
